

Mapping Polymedia

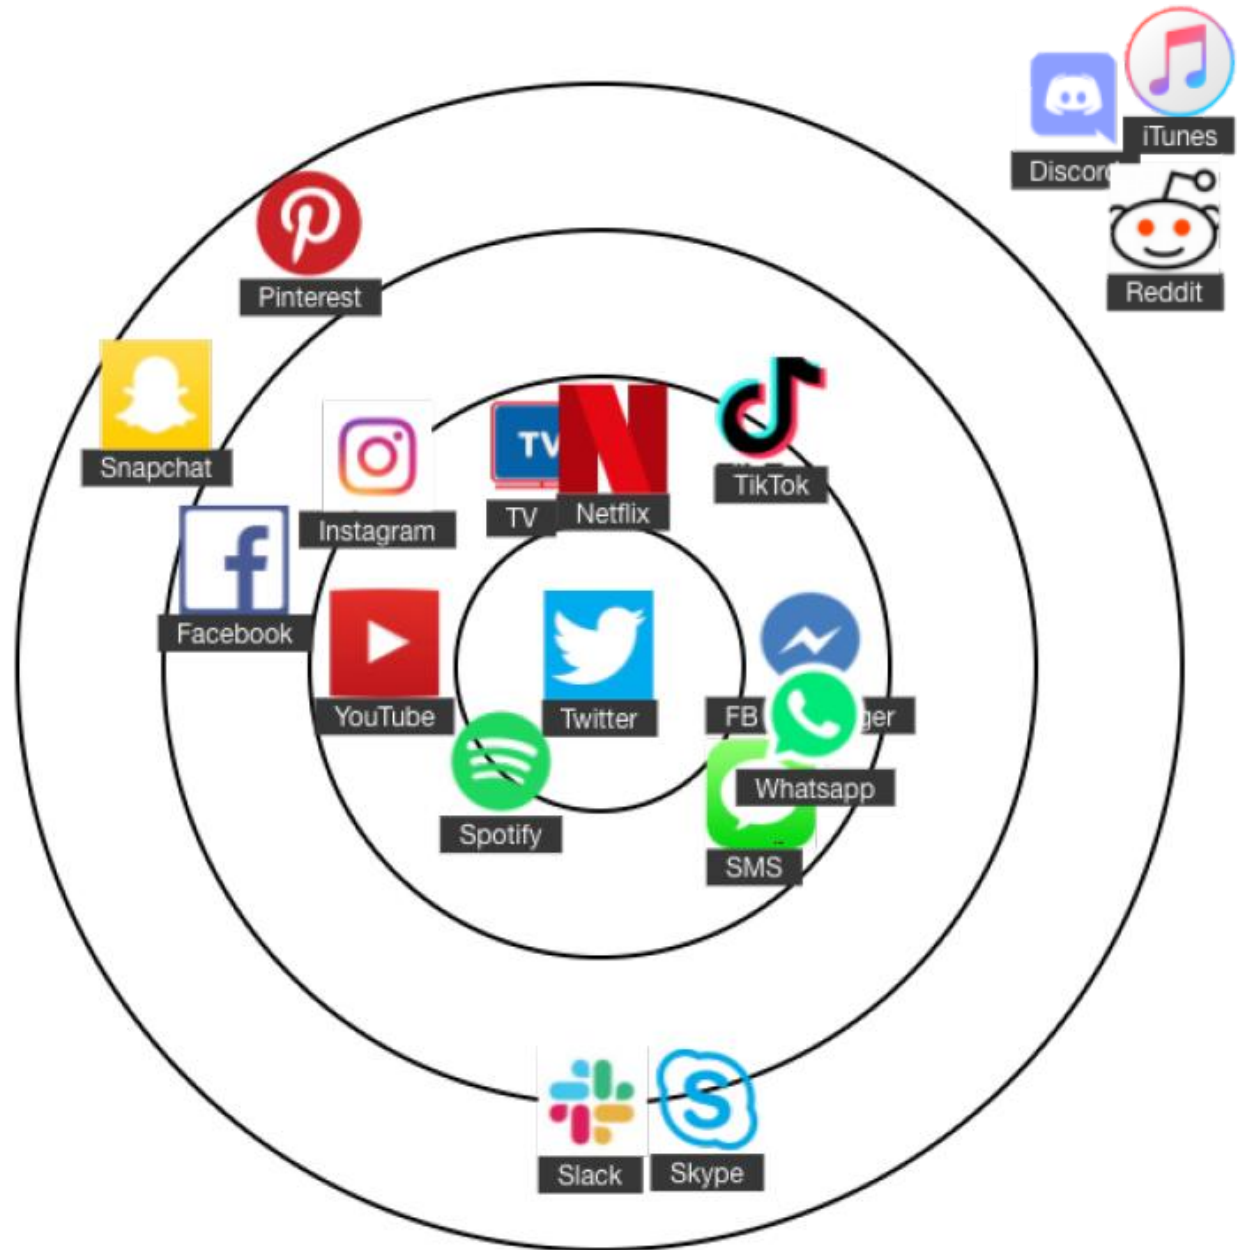

Ethnographic strategies for navigating ever complex media environments and practices

Challenges

- Polymedia: complexity in growing variety of media and their possible uses (Madianou and Miller 2012).
- Pandemic context: importance of digital ethnography (Hine 2015, Horst and Miller 2012, Pink et al. 2016).
- Interlinked with general challenges of constructing field sites in ethnography (Burrell 2009, Marcus 1995).

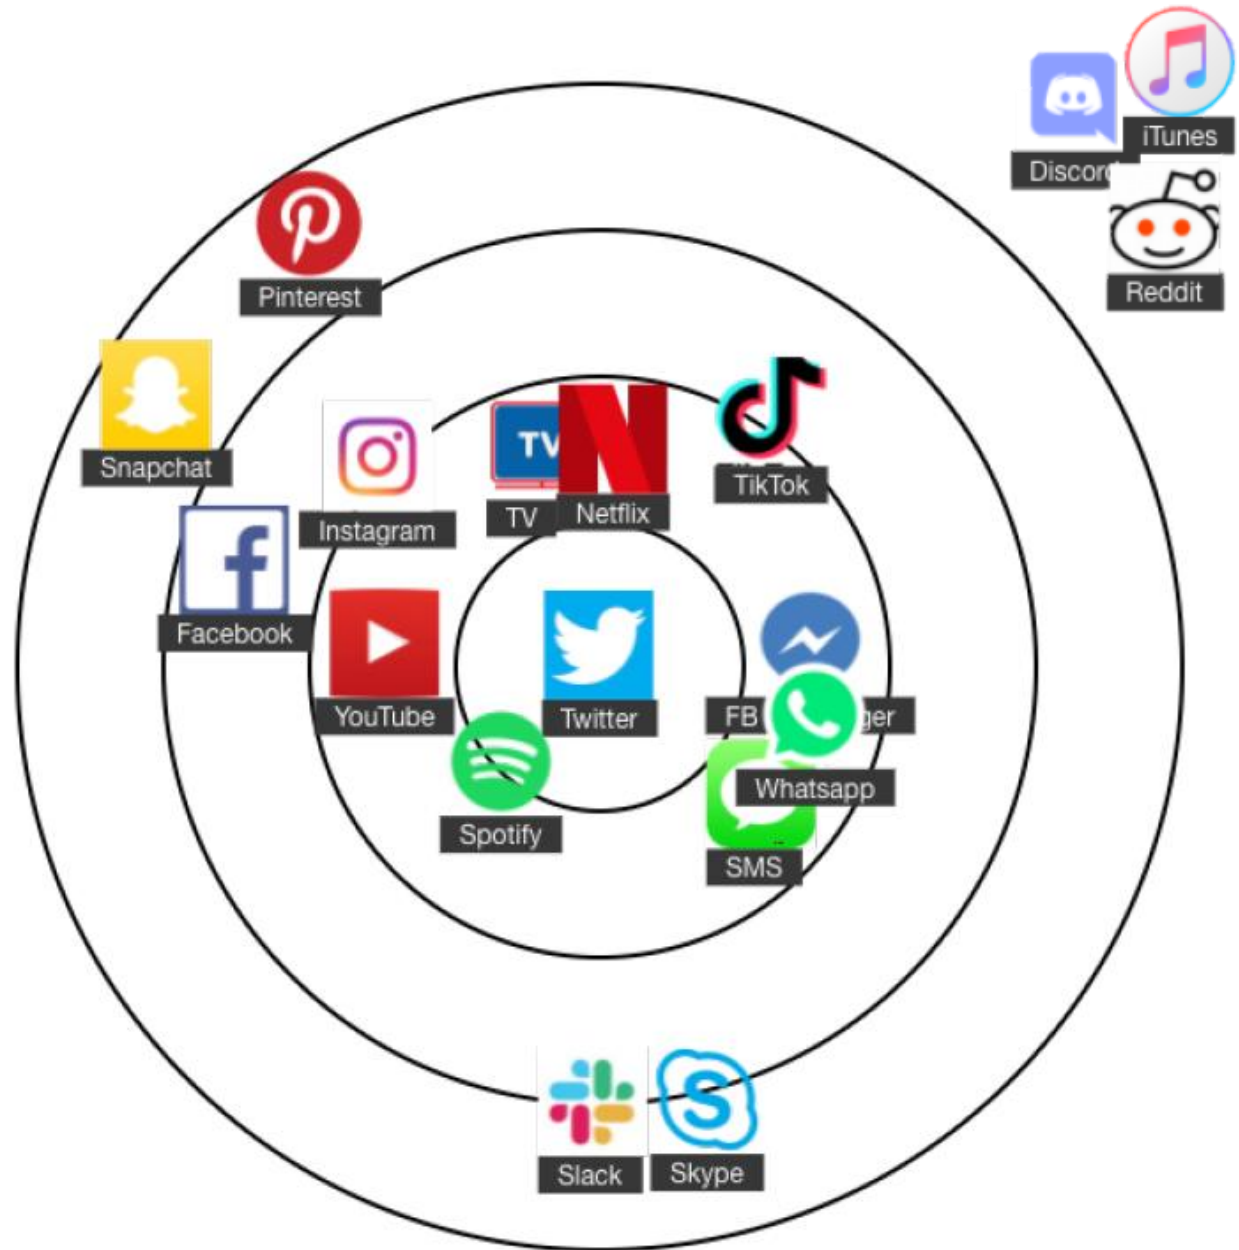

Maps as entry points

- Importance of participants visualising and reflecting on their naturalised media use (compare also Merten 2020).
- Importance of having common ground for discussion guided by the participant's point of view on media and their uses.

Maps as boundaries

- Understanding the meaning and importance of apps, like TikTok, in relational terms.
- Tracing where all people do encounter TikTok online and where online they bring TikTok content themselves.
